**NOVELTY (N), INVENTIVE STEP (IS) CLAIMS 1-44**

None of the cited documents discloses or (individually or in an obvious combination) suggests the invention as claimed in claims 1-44 wherein—as illustrated in figures 1A to 1C—an initial elliptical trace is followed by subsequent elliptical traces of increasingly higher eccentricity until an almost line trace is produced, after which the eccentricity is again progressively reduced until the initial trace is reproduced. The closest prior art is SEIBEL which discloses an ellipse that is progressively shrunk in order to fill in its area. Therefore the claimed invention is novel, involves an inventive step, and is industrially applicable.
